

BLACK CANVAS[®]

WHITEPAPER

Gameplay • Settlement • Capital & Governance

Industry Context & Structural Problem: Common Failure Patterns

Mixed Token Roles

Gameplay, settlement, and capital roles are dangerously merged into a single token structure.

Speculative Pressure

Token price speculation heavily distorts gameplay incentives and platform behavior.

Unstable Reward Loops

Reward systems become dependent on secondary market conditions rather than operational sustainability.

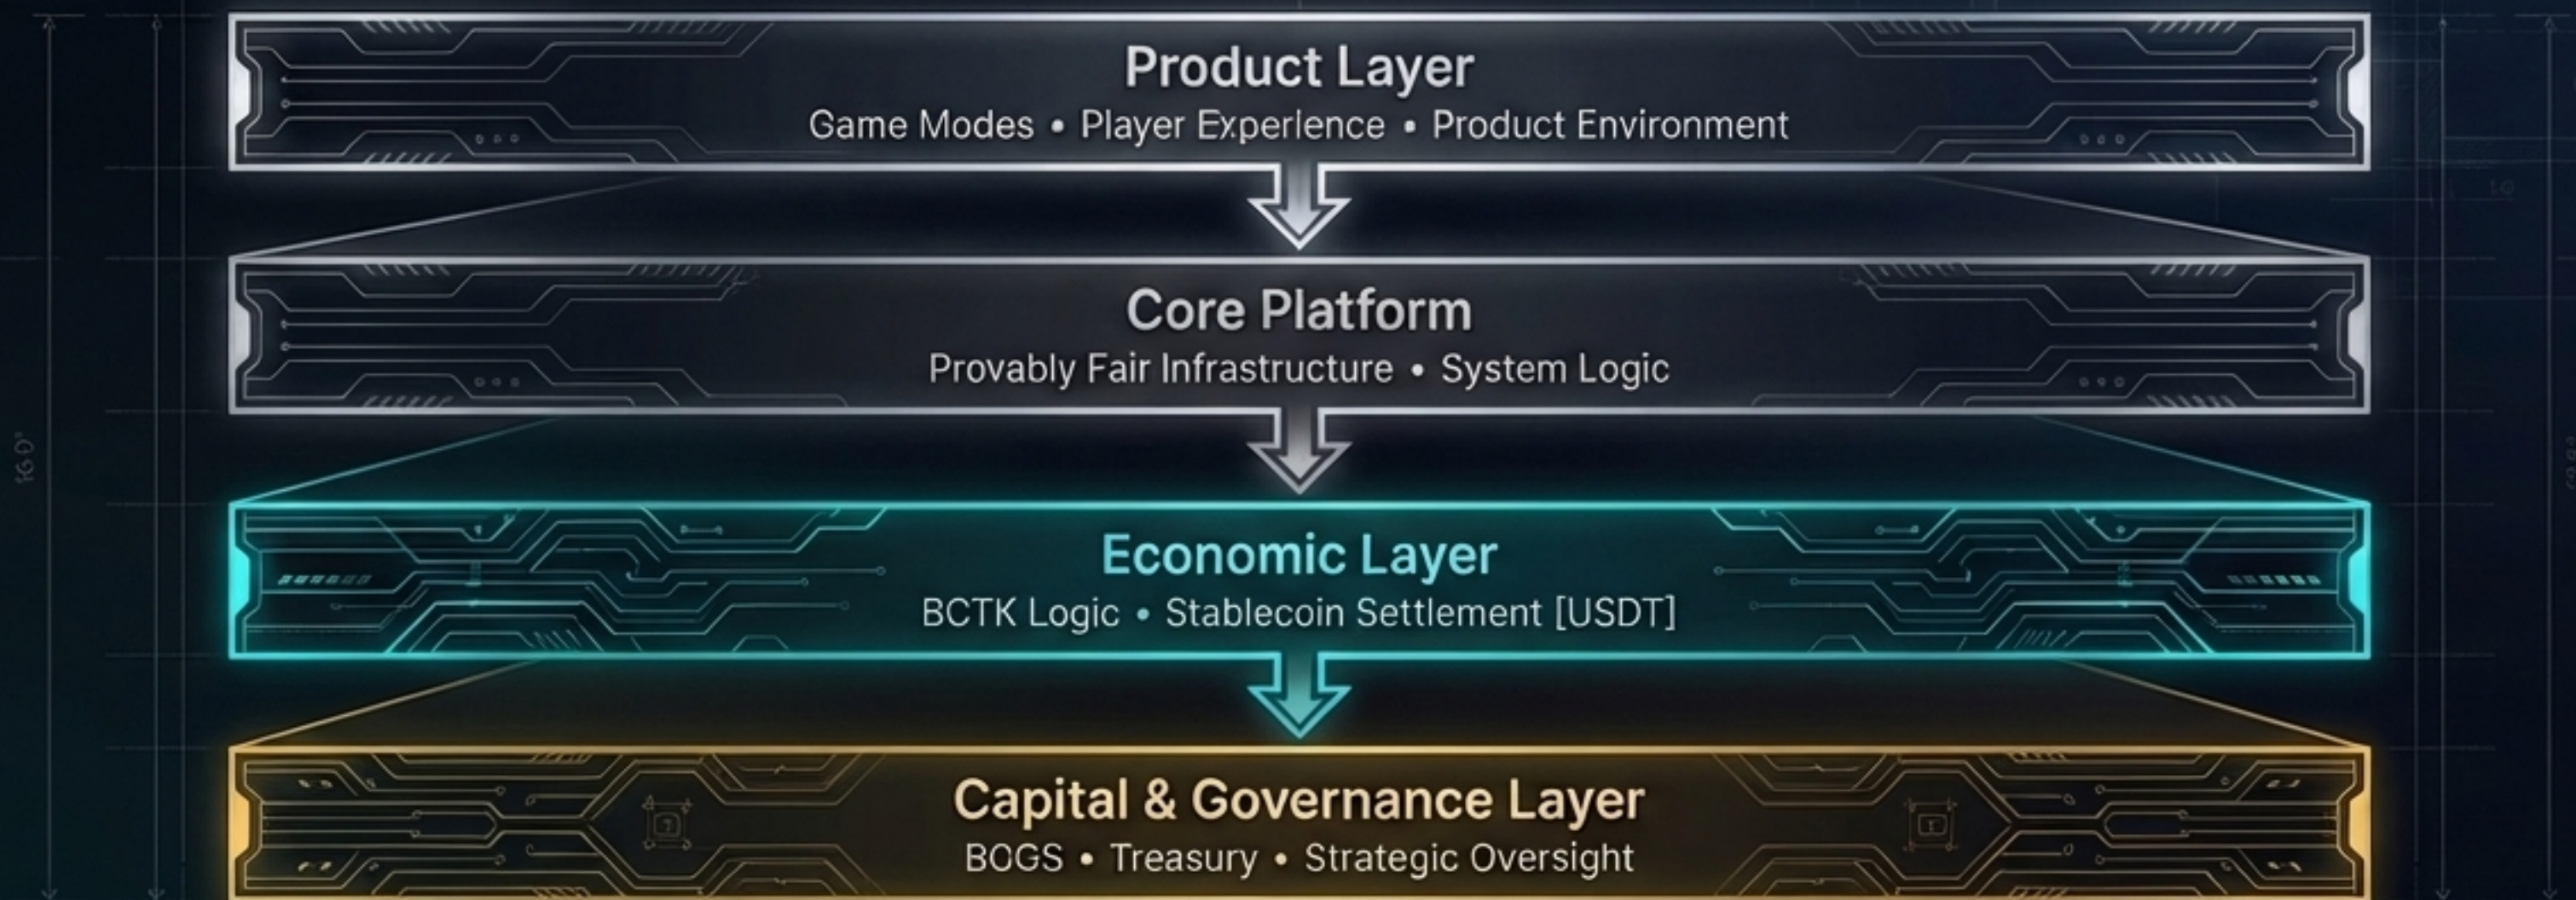

Misaligned Incentives

Players, investors, and the platform operate under conflicting economic expectations.

Structural fragility inevitably emerges when gameplay, financial settlement, and capital logic are not clearly separated.

Separation of Systems

Black Canvas® is structured as a gaming platform whose long-term credibility depends on the disciplined separation of gameplay, financial settlement, and capital functions.

Designed as a long-term platform ecosystem, not a token-led operating model.

Structured Economic Architecture & Asset Responsibility

BCTK (Gameplay Layer)

Primary Role: Gameplay incentive & reward

Primary Users: Players

Used For: Rewards, incentives, engagement

 **NOT Used For:** Financial settlement, buy-ins, payouts, capital, or governance.

Stablecoin/USDT (Financial Layer)

Primary Role: Financial settlement

Primary Users: Players & Platform

Used For: Deposits, payouts, operational revenue flows

 **NOT Used For:** Gameplay rewards, governance participation.

BCGS (Capital & Governance Layer)

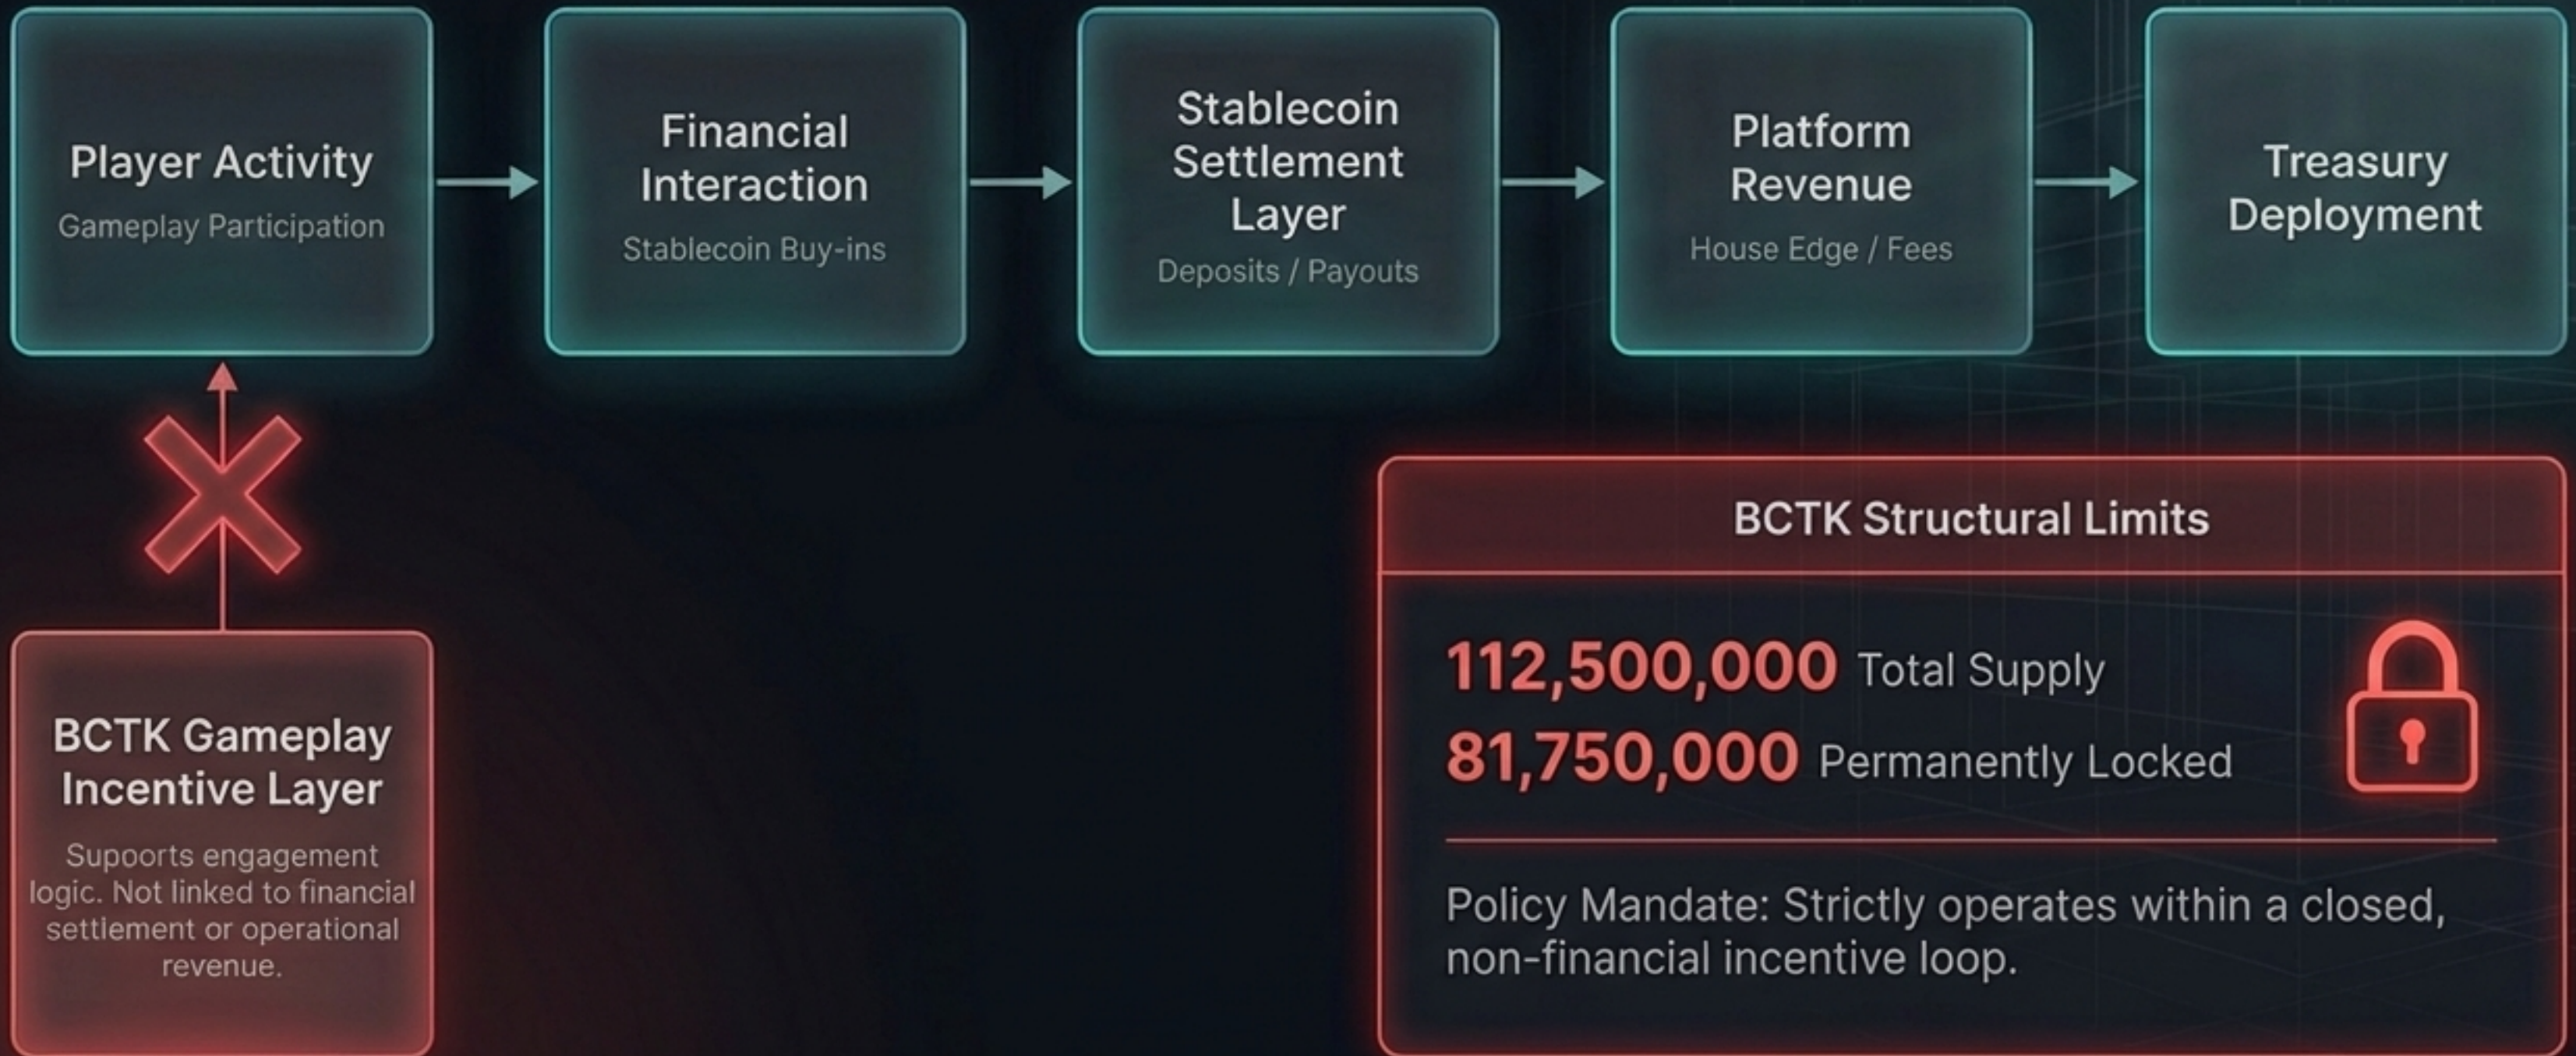

Primary Role: Governance & treasury instrument

Primary Users: Governance participants & strategic stakeholders

Used For: Strategic direction, treasury oversight, capital structuring

 **NOT Used For:** Gameplay rewards, buy-ins, financial payouts.

Revenue Generation & Incentive Isolation

BCGS Governance Architecture Snapshot

Fixed Supply

250,000,000

Total BCGS Supply

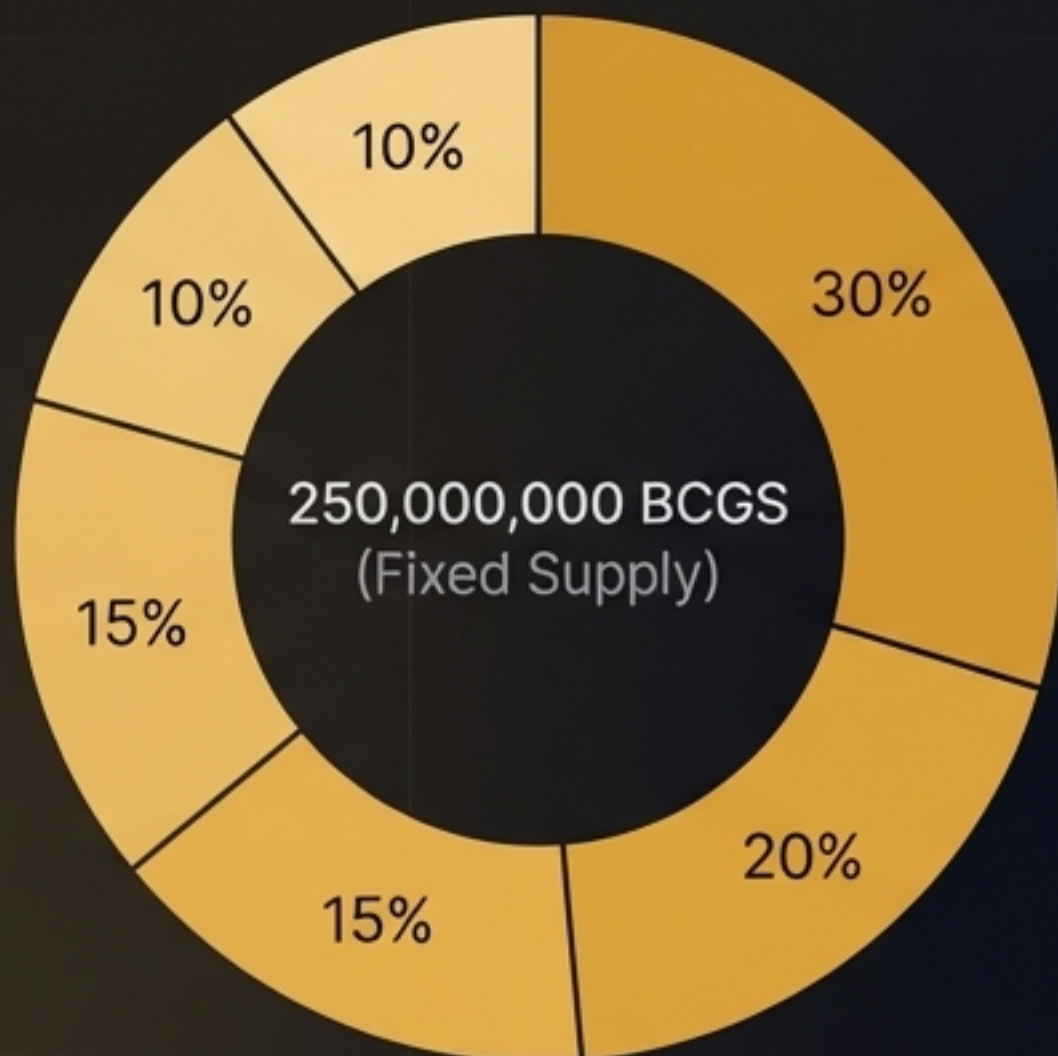

Emission Type: Fixed Supply (Zero Inflation)

Qualitative Roles

- ✓ Capital & Governance Layer instrument
- ✓ Governance participation & treasury oversight
- ✓ Strategic alignment for long-term platform coordination
- ✗ No in-game use, no gameplay rewards, no settlement function
- ✗ No yield promises or gameplay-linked monetization role

The 250 million BCGS framework provides a fixed governance-capital structure supporting treasury discipline and long-term platform alignment.

BCGS Fixed Supply Allocation

1. 30% • 75,000,000 — Treasury (Platform Reserve)

2. 20% • 50,000,000 — Public Sale

3. 15% • 37,500,000 — Team & Founders

4. 15% • 37,500,000 — Private / Seed Investors

5. 10% • 25,000,000 — Marketing & Partnerships

6. 10% • 25,000,000 — Ecosystem / DAO Fund

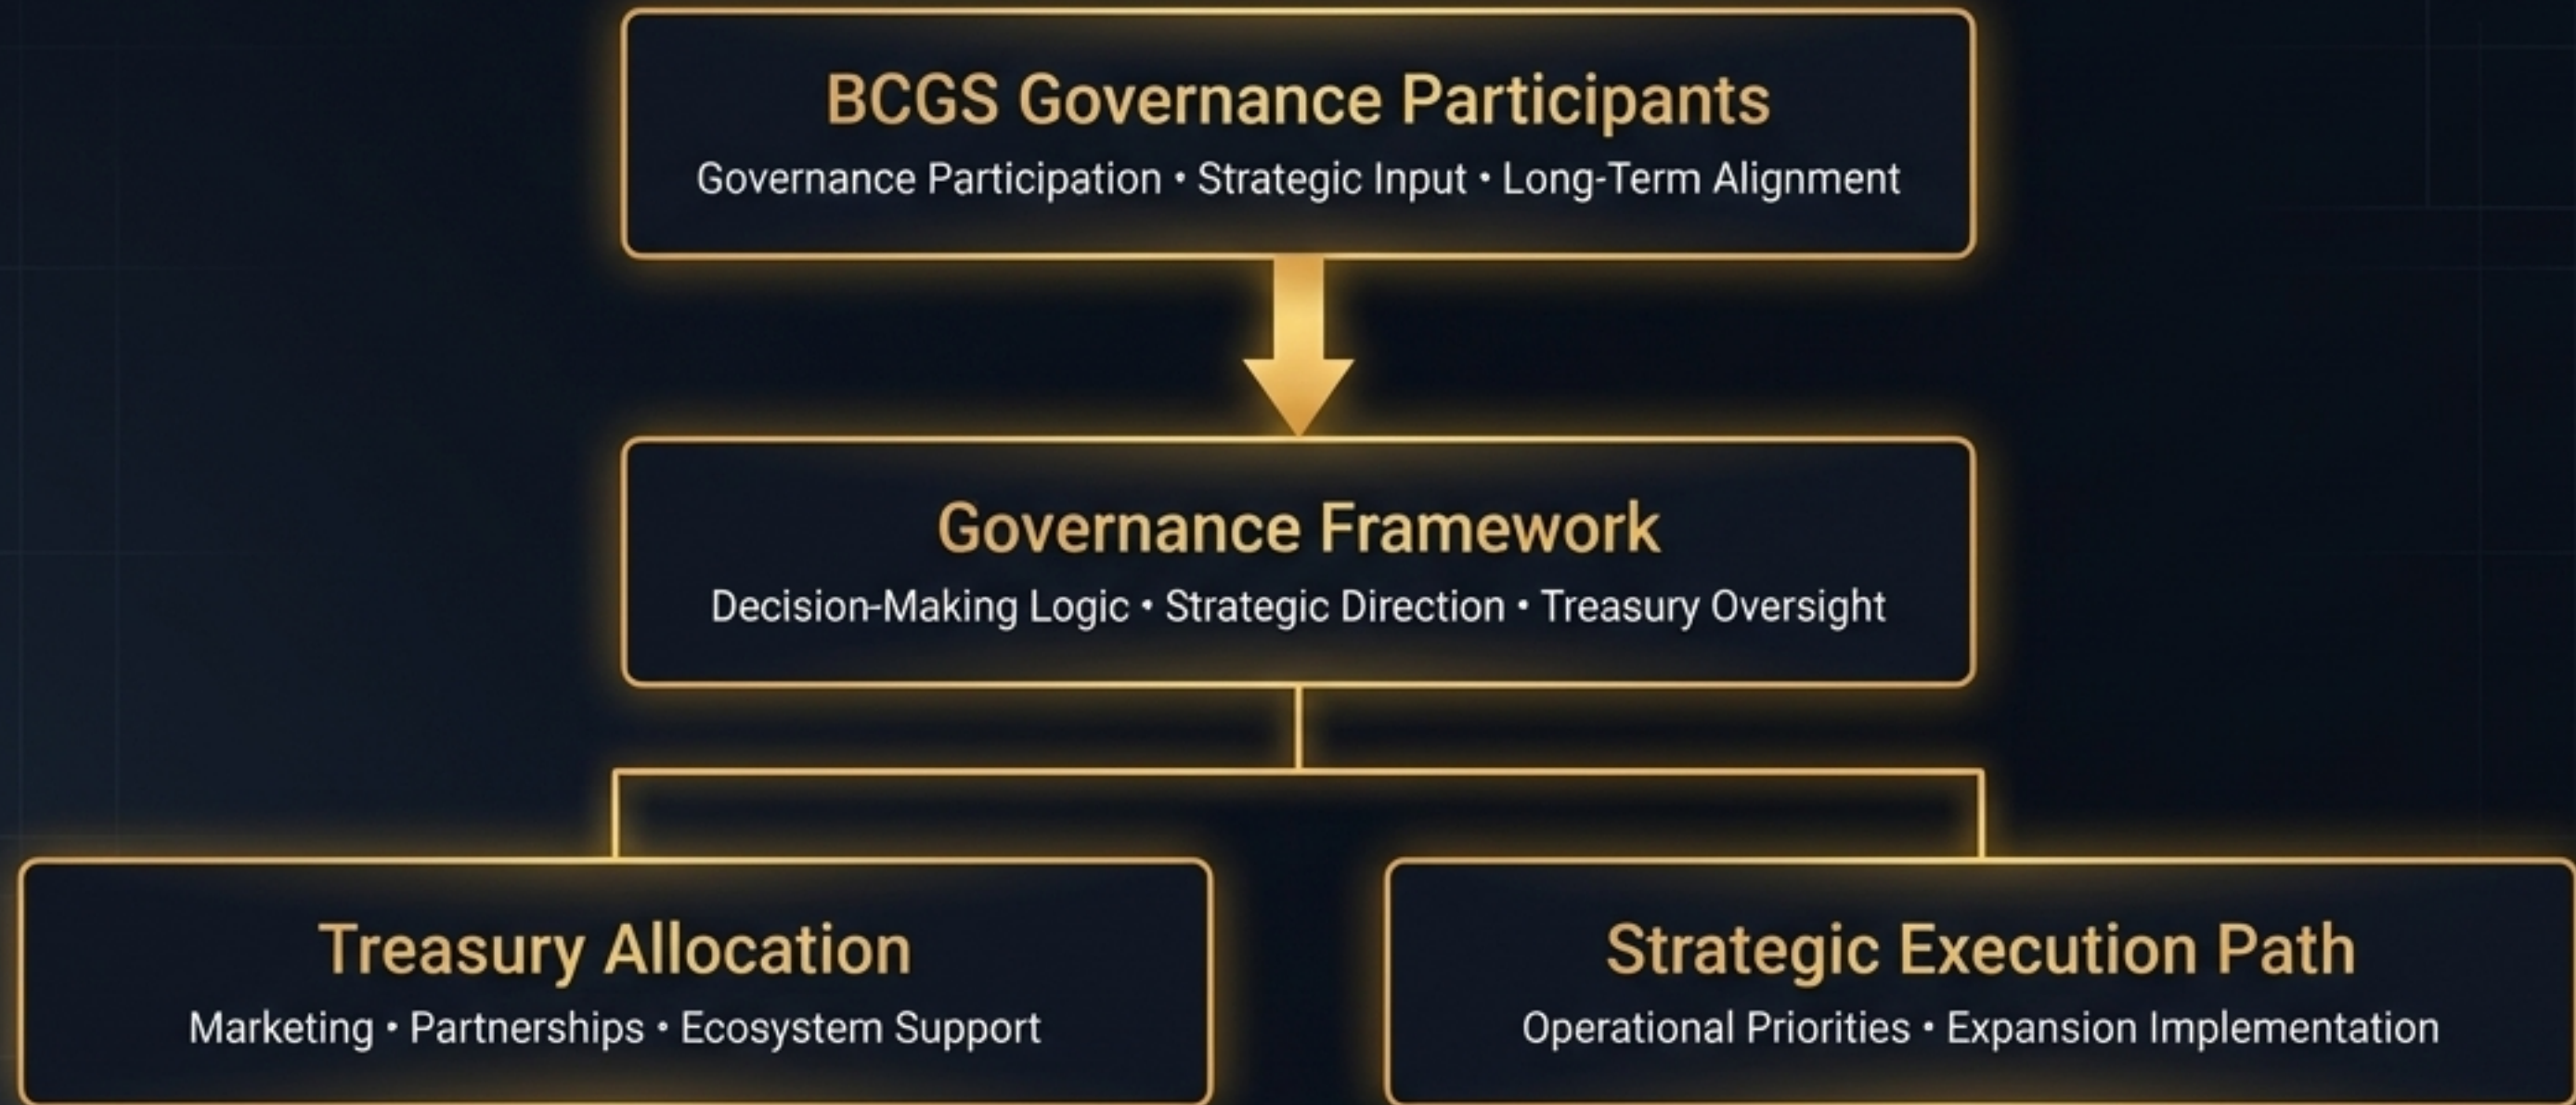

All allocations are subject to structured vesting, hard lock-ups, or controlled release schedules to enforce long-term strategic alignment.

Capital Formation & Vesting Discipline

Round	Participation Type	Structural Purpose	Release Discipline
Seed	Strategic participation	Early capital alignment	Long-duration vesting
Private	Institutional/private participation	Capital formation and strategic network support	Structured vesting discipline
Public	Broad participation	Market entry and community access	Limited initial unlock with staged release

Governance & Treasury Routing Framework

Governance and treasury functions remain structurally and operationally separate from gameplay operations and financial settlement.

Structural Risk & Mitigation Synthesis

Risk	Mitigation Logic
Gameplay Inflation Risk	BCTK remains mechanically separated from settlement and revenue, allowing incentives to operate without destabilizing cash flows.
Capital / Gameplay Conflict	BCGS remains structurally removed from gameplay operations, preventing investor expectations from distorting player balance.
Payout Instability	Dedicated Stablecoin settlement keeps deposits, payouts, and transaction flows transparent and auditable.
Token Role Confusion	The asset framework assigns one strictly defined role to each asset.
Treasury Misallocation	Governance routing structures separate strategic decision layers for transparent oversight.

Product Definition & Core Gameplay Thesis

Black Canvas[®] is structured as an original platform-native card gaming product rather than a token-led wrapper around legacy casino formats.

Product Identity

Positioned as an original card gaming product, not a derivative adaptation of roulette, blackjack, or baccarat. This distinct product identity supports long-term ecosystem expansion.

Core Gameplay Foundation

Built around a native gameplay structure designed to support participation, rhythm, and mode-based expansion. This creates a scalable gaming environment.

Product Before Token Logic

The economic architecture does not define the product; the product defines the architecture. No financial instrument substitutes for gameplay integrity.

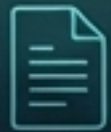

Platform Relevance

Capable of supporting future development across multiple gameplay modes and community formats without collapsing gameplay logic into treasury mechanics.

Product originality is the primary foundation upon which the entire platform architecture is built.

Current Platform Status & Execution Readiness

Entering its next phase from an already established legal, product, intellectual property, and infrastructure foundation.

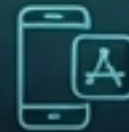

1. Legal & Corporate Foundation

Operations grounded in Blackcanvas BC LLC, registered in Wyoming, USA, in 2021.

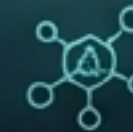

2. Intellectual Property

Core brand rights and industrial design protection secured, anchoring originality within a formal IP framework.

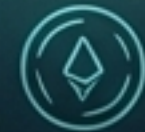

3. Product Deployment

Active test distribution established across App Store and Google Play pathways. This confirms real usability beyond paper architecture.

4. Digital Infrastructure

Operational base established across owned domains and active communication channels for broader ecosystem growth.

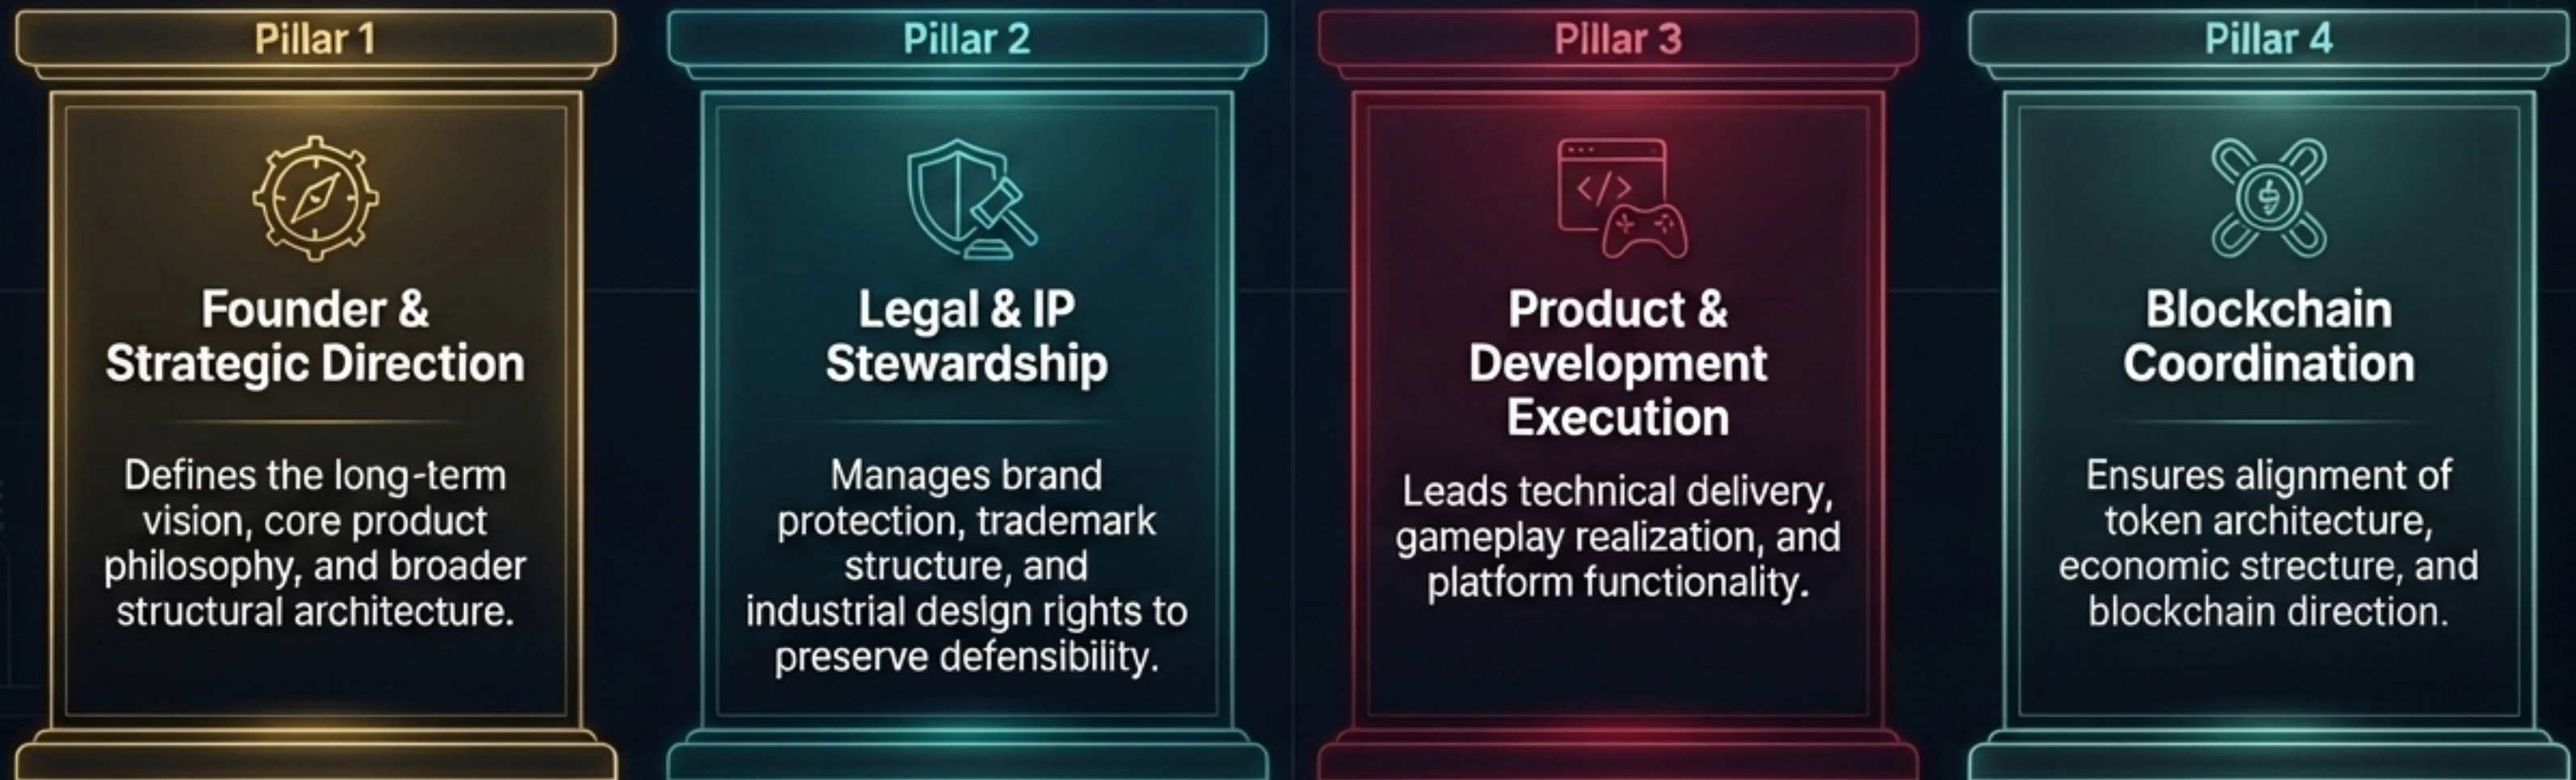

5. Strategic Readiness

BCTK deployed, updated tokenomics prepared, and structural separation of economic layers formally codified.

Founding Structure & Operating Responsibilities

Supported by a defined founding and operating structure spanning strategic direction, legal stewardship, product development, and blockchain coordination.

Coordinated Operating Principle: Vision, legal protection, technical delivery, and blockchain alignment remain connected while preserving clear responsibility boundaries to avoid single-function or token-centric collapse.

Strategic Development Phasing

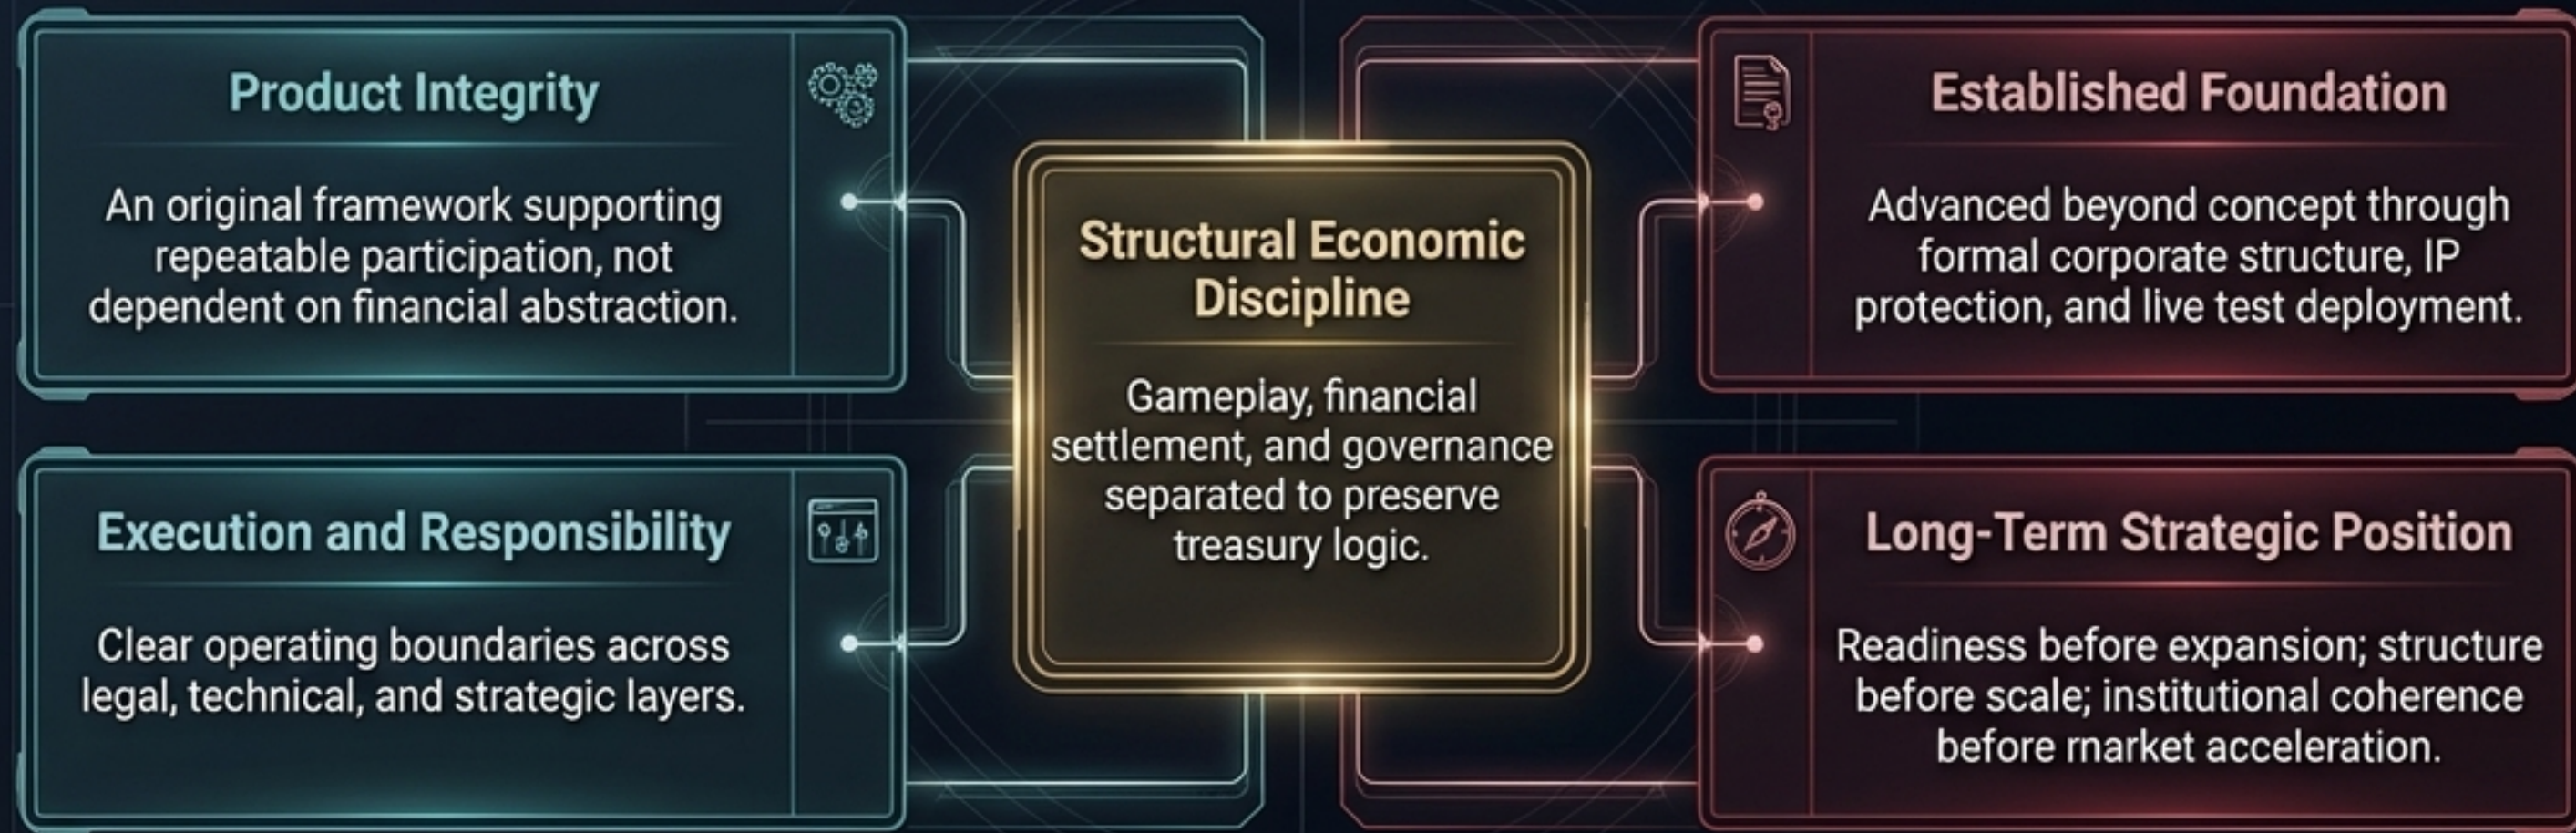

Advancing through a phased model where legal structure, product readiness, and economic discipline precede capital expansion.

Structure precedes scale. Product precedes capital expansion.
Platform integrity remains prior to short-cycle market acceleration.

Closing Institutional Synthesis

Black Canvas® is positioned as a structured long-term gaming platform built on product integrity, legal foundation, economic separation, and disciplined strategic progression.

Black Canvas® represents an architecture where product originality, legal grounding, economic separation, and phased execution are aligned to support durable long-term development over short-cycle speculation.
